SCRATCH GAME (MULTITASKING MADNESS)

The idea behind this game is simple. The game tests the users ability to multitask by trying to preform two actions at once. The first is to try and stop the balls (which begin falling from the top of the stage) from falling below the red line at the bottom of the stage by placing the paddle underneath them. The paddle is controlled by using the mouse pointer and moving it around the stage. The user accumulates points for every ball they stop from falling below the red line. The second action is trying to stop the tnt from falling below the red line. To stop the tnt from falling below the red line, the user must move the trampoline so that it is placed below the tnt. To move the trampoline left, the user can press left arrow or the a key. To move the trampoline right, the user can press the right arrow key or the d key. The user also has a set number of lives and every time a ball falls below the red line, a life is deducted. Once the tnt falls below the red line or the lives are equal to zero, the game will end. To begin the game, the user must click the green flag.
